

### **Tips for Medicine Storage**

1. Medicine should be kept in a cool, dry place where children cannot reach. Unless it is stated on the label, refrigeration is not required.
2. Read the drug label carefully. For medicines that require refrigeration, keep them in the refrigerator, but not the freezer.
3. Medicine should not be stored in containers for food and drinks to avoid being mistaken.
4. Discard any surplus, expired or spoiled medicine
5. Do not put different kinds of medicines in the same container. Keep medicines in their original containers instead to avoid mixing them up.
