

How to use your medicine

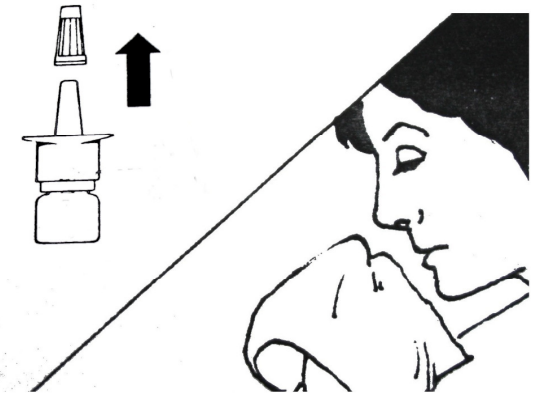

Nasal Spray

(1) Wash hands.

(2) Before using, gently blow your nose to clear your nostrils. (To prepare for use, first shake the bottle and hold as shown. If you are using for the first time or have not used the spray for a week or more, test by spraying into the air until the jet appears as a fine mist.)

(3) To use, close one nostril by placing your thumb over the opening. Insert the nosepiece into the other nostril. Whilst you breath in gently, press downwards on the collar of the nasal spray.

(4) On completion replace dust cap.

Breathe out through your mouth and repeat for your second spray in the same nostril if needed. Now repeat the whole process in the other nostril.
