

Non-invasive Skin Tightening Treatment

無創緊緻肌膚治療

Introduction

The Thermage procedure is a non-invasive treatment that delivers tighter skin, renewed facial contours and healthier collagen after one treatment. The Thermage procedure is operated by qualified and professional physicians who specialize in cosmetic procedures.

What is Thermage Procedure?

The Thermage procedure employs a patented capacitive radiofrequency (CRF) technology called ThermoCool, which has been cleared by the US Food and Drug Administration for the non-invasive treatment of facial wrinkles. It has been clinically proven to tighten and gently lift skin to smooth out wrinkles and renew facial contours. The incision-free procedure is fast and easy, and requires no downtime from normal activities. The procedure can be performed on patients of all skin types.

Procedure

The ThermoCool device uses a sophisticated treatment tip called ThermoTip, which delivers a controlled amount of CRF energy. With each touch to the skin, the ThermoTip device uniformly heats a large volume of collagen in the deeper layers of the skin and its underlying tissue while simultaneously protecting the outer layer of the skin with cooling. This deep uniform heating action causes deep structures in your skin to tighten. Over time, new and remodeled collagen is produced to further tighten skin, resulting in healthier, smoother skin and a more youthful appearance.

During Treatment

With each touch of the ThermoTip device, patient will experience a brief, deep heating sensation as the RF energy is delivered to the skin and underlying tissue. The Thermage procedure can take anywhere of the body from a few minutes to an hour, depending on the size of the treatment area.

After Treatment

Measurable tightening improvements appear gradually over 2 to 6 months after treatment session. Result may vary. Usually, treatment results can last for 24 months or longer.

But the eyes of the Lord are on those who fear him, on those whose hope is in his unfailing love.

Psalms 33:18

Safety

With over 190,000 estimated worldwide patient treatments to date the reported incidence of side effects is less than 0.4%. The most frequently reported incidents are classified as redness and blisters on or around the treated area. These side effects will disappear in a few days or weeks.

* Result may vary. Please consult your doctor in advance.

Service Hours (By appointment only)

Mon to Wed, Fri 10:00 am – 6:00 pm
 Thur 10:00 am – 1:00 pm
 Sat 09:00 am – 1:00 pm
 Closed on Sunday and public holidays
